

The Main Characteristics of Freight on Hot Streams

EROFEEVA Natalya V., CHEBOTOVA Irina N.

Mining Institute, Institute of Thermal Power, T.F. Gorbachov Kuzbass State Technical University, 65000 Kemerovo, Russia

Abstract: Authors determined temperature of the extinguished coke by fractional structure. Authors suggested to lower temperature influence from the large heated pieces on a tape at the expense of loads segregation.

Keywords: conveyer belt, coke, temperature, segregation, fraction

1. Introduction

Belt conveyors are applied to transportation of hot freight at coke-chemical plants. The conveyor belt is the most vulnerable element. The cost of a belt makes from 40 to 70% of cost of the conveyor. The belt fails because of thermal aging and burning by the heated pieces in case of violation of a technological mode. Suppression of coke happens in two stages. One stage is that the heated coke is unloaded in the wagon where suppression by wet way is made. The other is that further coke is unloaded on a ramp where there is an extinguishing of the heated centers. Temperature of the extinguished coke is one of the main of the characteristics necessary for a right choice of conveyor transport on hot traffics of loads.

2. Characteristic of the work

At Cherepovets iron and steel works^[1], researches of temperature of coke of wet suppression were conducted. In work it is noted that at wet suppression of 7–10 percent of coke have temperature of 100–160 degrees, the rest – less than 100

degrees Celsius. At the same time in the lump of transported coke of wet suppression pieces (2–5%), surfaces having temperature to 700–800 of degrees Celsius meet. Similar results were received by authors at research of temperature of a surface of coke at the Kemerovo coke-chemical plant (fig. 1, f). Thus the maximum temperature of a surface of coke reached 550–600 of degrees Celsius.

The granulometric structure of freight has a great impact on extent of cooling. Smaller fractions making bulk of transported freight are exposed to deeper cooling. Large pieces are exposed to superficial cooling and in the course of further movement from a stage on the conveyor are warmed due to remained internal heat.

Unfortunately, in work^[1] the attention to distribution of temperature of a surface of coke on fractional structure isn't focused. Authors tried to take on the working conveyor at a factory temperature of a surface of coke on fractional structure 0–50 mm; 50–100 mm; 100–150 mm; 150–200 mm and +200 mm (fig. 1, a–e). Measurements were made in the contactless way by a pyrometer.

The expected temperature of the coke unloaded on the belt conveyor, at confidential probability of 95% is specified in Tab. 1.

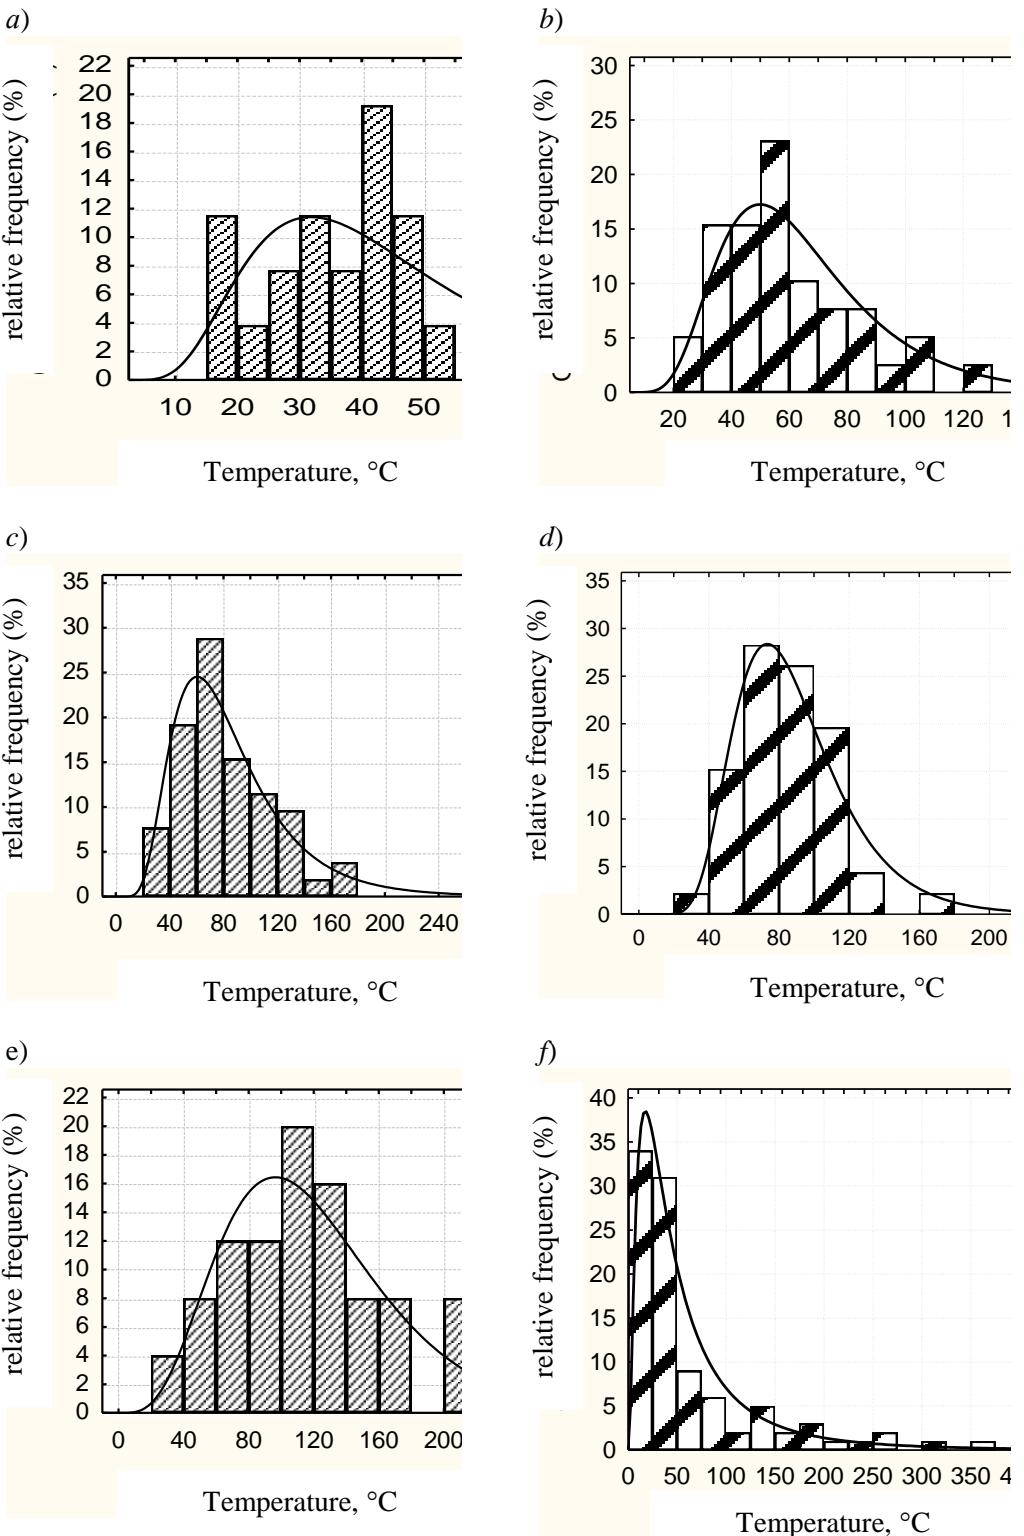

Fig. 1: Histograms of distribution of temperature of a surface of coke of fraction:

a – 0–50 mm; b – 50–100 mm; c – 100–150 mm; d – 150–200 mm; e – +200 mm; f – 0–300 mm (including pieces of red hot) and the distribution function: a, b, c, d, f – lognormal; e – gamma

Table 1: Coke temperature on fractional structure

Fractions, mm	+50	50–100	100–150	150–200	+200	0–300
Range of temperature, °C	35,2–51,1	55,5–75,2	72,6–98,4	78,6–99,2	98,5–141,1	53,2–90,0

Apparently from Tab. 1, the bulk of transported coke has temperature not exceeding 150°C. But at the same time pieces of a red incandescence meet. Presence of coke of a red incandescence leads to burning of a working lining of the conveyor, and sometimes and a belt framework. In special situations, when unloading on a coke tape to the high maintenance of pieces of a red incandescence (or the centers) there can be a belt ignition^[2].

3.Conclusion

As the small fraction of a transported material is heated to 50°C and most to 140°C, it is offered to use small fraction as a layer between larger pieces and a belt, thereby having lowered temperature load of a belt. Such distribution of freight can be received shock and vibration influence on a non-working facing of a loaded branch of the conveyor. In case of hit of

the single heated piece on a belt surface the piece as a result of vibration will make micro jumps. During free flight of a piece at the expense of its flow it will start being cooled with an air stream intensively and by that reducing not only the general time of contact with a belt, but also a piece thermolysis to a belt.

Foreword

Mining technology is an important issue on resource exploitation, which is related to mine production security and energy supply. In order to promote the scientific and technological progress and international exchanges of the mining technology, the Taishan Academic Forum – Project on Mine Disaster Prevention and Control is to be held on Oct. 17-20, 2014, in Qingdao, China. The aim of the symposium is to summarize the modern coal industry achievements, in safety green mining methods and the related fields. There will be experts and scholars to attend the meeting, from the coal industry enterprises, universities, research institutions and other related fields of China and Russia.

The main topics of the symposium include: safety green mining methods, mine construction and modernization, the mining theories, methods and technology, the construction safety of mining and underground engineering, the operation and management of mining and underground engineering, etc.

The symposium is organized by the Education Department of Shandong Province, Shandong University of Science and Technology, Coal Industry Bureau of Shandong Province. It is undertaken by Institute of Mining and Safety Engineering, Shandong University of Science and Technology and State Key Laboratory of Mine Disaster Prevention and Control.

We are convinced that the symposium is going to play an important role in the development of the coal mining technology and international communication. Heartfelt thanks are extended to domestic and overseas scholars who have given great supports to this conference and all the authors who have presented the papers.

Contents

Part I. Mine construction and modernization

1.	Selection of a rational form for the steel winding tower as a preventive measure to increase its industrial safety <i>Elena G. Kassikhina., Vladimir V. Pershin, Nikita O. Butrim, Weiguo Qiao</i>	1
2.	Engineering and process design solutions for the vertical shaft completion <i>Weiguo Qiao, V.V. Pershin, E.G. Kassikhina, N.O. Butrim</i>	5
3.	Study on construction of embedded bolt sleeve's precision in massive concrete <i>Chongge Wang, Jiachuan Liu</i>	11
4.	Economic and technological criteria of choosing the support for construction of mine workings <i>Song Weijie, V.V. Pershin, Yu. A. Masaev, V. Yu. Masaev, Weiguo Qiao</i>	15
5.	Constructions parameters updating of protecting apron under deepening of vertical shafts <i>Vladimir V. Pershin, Aleksandr I. Kopyitov, Mikhail D. Voitov, Akhmed A. Wetti, Ivan V. Zhuk</i>	21

Part II. Mining theory, method and technology

6.	Highwall mining stability <i>Baotang Shen</i>	25
7.	Study on the movement law of overburden strata during mining strip pillar with paste <i>Guo Weijia , Li Yangyang, Zhang Baoliang, Wang hailong, Sun xizhen</i>	38
8.	Numerical simulation study on influencing factors to part-filling pillars' stability <i>Wanpeng Huang, Yanghui Ren, Lin Gao</i>	44
9.	Research on strip filling surface subsidence rule <i>Shi Yongkui, QI Minhua, Zhang Jingyu, Hao Jian</i>	52
10.	Characteristic analysis of surface subsidence in deep mining <i>Chang Xikun, Wang Rongfa , Zang Jincheng</i>	62
11.	Mechanical models and support technologies for retaining gob-side entry <i>Yunliang Tan, Yanchun Yin, Jianguo Ning, Tongbin Zhao</i>	67

12. Influence of mining and retaining parameters on evolution of hazard rockburst in strip-pillar mining <i>Wang Chunqiu, Li Wenshuai, Gu Shitan, Ma Chuanle, Xiao Zhimin</i>	73
13. The application of fuzzy analytic hierarchy processfor thick coal seam mining methods in China <i>Wang Lei, Yang Yang, Cheng Huimin</i>	84
14. Simulation study of dynamic response of bolt support in impact roadway <i>Liu Fan, Liu Wenjie, Wang Tongxu</i>	93
15. Rapid heading technology of coal seam contained iron sulfide nodules <i>Xinglin Wen, Mengmeng Dong, Ran Fan, Kai Sun, Zhongjian Zhang</i>	99
16. Simulation and analysis on characteristics of lower-group roadway surrounding rock under deep near interval coal seam <i>Zhang Peisen, Wang Hao, Lin Dongcai, Kan Zhongui</i>	107
17. Study on grouting anchor cable supporting technology of roadway through extra large fault fracture zone <i>Liu Jin-xiao, Jing Ji-dong, Feng Yi-yu, Wu Lei, Zhang Pei-sen</i>	114
18. Study on optimal design of concrete-filled steel tube support in coal mine <i>Liu Limin, Zhao Shijun, Cao Junzhi, Qin Zhongcheng</i>	119
19. Measurement and analysis on failure height of overburden strata of mechanized sublevel caving in shallow region of Baodian coal mine <i>Li Fuchen, Zhang Wenquan, Guo Wei, Wang Zongsheng, Li Yunjiang, Liu Yanxin</i>	126
20. Study on the rapid excavation technology of deep large cross-section rock tunnel <i>Liu Xinjie, Kong Dezhong, Song Gaofeng</i>	133
21. Large deformation control principle and reinforcement technique for solid coal rib of large-section gob-side tailentry in thick coal seam buried deeply <i>Zang Chuanwei, Chen Miao, Tan Yunliang, Ma Chuanle, Meng Xiangjun</i>	138
22. Durability test of gangue paste filling material <i>Liu Yin, Wang Qifeng, Zhang Haoqiang</i>	144
23. Coal deposits' mining with high content of natural radionuclide <i>Pavel B. Avdeev, Galina P. Sidorova</i>	150
24. Advanced technology based on new technological and organizational principles of spatial development of front of mining operations at open pits <i>Alexei V. Selukov</i>	156

25. Fractal characteristics of mudstone microscopic morphology in MATLAB environment
Huang Dongmei, Zhang Zhenquan, Lin Xiaofei, Li Huaxue, 161

Part III. Mining equipment and machinery

26. Modeling of hydraulic power cylinder seal assembly operation
Gennady D. Buyalich, Konstantin G. Buyalich, 167
27. Formation Auger equipment reliability
Yuri V. Drozdenko, 171
28. Stress-deformed state knots fastening of a disk tool on the crowns of roadheaders
Aleksey Khoreshok, Leonid Mametyev, Andrey Borisov, Aleksey Vorobiev, 177
29. Preventive maintenance of mining equipment based on identification of its actual technical state
Vladimir Kovalev, Boris Gerike, Aleksey Khoreshok, Pavel Gerike, 184
30. Evaluation of explosion protection means of mine electrical equipment for operation in excavations of coal mines
Vladimir Efremenko, Roman Belyaevsky, 190

Part IV. Construction safety in mines and underground engineering

31. Study of asymmetric failure law and support for large embedded depth roadway driving along the roof in inclined coal seam
Cheng Guoqiang, Yan Mingju, Zhu Hongli, Yu Haifeng, 195
32. Analysis on human safety behavior mode during the production process
Zhou Gang, Xue Jiao, Wang Hao, Zhang Qi, 203
33. Control design of roof rock for advance blasting in roof on gob-side entry without roadside support
Zhang Kai-zhi, Liu Bao-cheng, 211
34. Drilling strata movement detection experiment on failure law of overlying strata movement
Shijian Yu, Zhaobin Liu, 218
35. Research of mining depth influence on floor coupled stree-seepage characteristics
Yin Liming, Shi Nan, Chen Juntao, 224
36. Rock burst danger warning and large diameter drilling pressure-relief technology in fully mechanized caving island coal face
Gu Shitan, Huang Ruifeng, Tan Yunliang, Jiang Bangyou, Li Wenshuai, 231

37. Numerical simulation of stress relieving and analysis of influencing factors on geostress measurement <i>Zhao Tongbin, Zhang Minglu, Li Zhanhai, Zhang Ze</i>	241
38. Numerical simulation of roadway gas migration based on the lattice Boltzmann method <i>Zhao Zhi-gang, Zhang Yong-bo, Tan Yun-liang</i>	248
39. Research status of wet duster in fully mechanized workface <i>Zhong Yang, Wu Meng-meng, Yang Xin-xiang, Xiao Wei</i>	258
40. Development and application of integrative jumbo for deep hole sampling <i>Wang Gang, Yang Xin-xiang, XiaoWei, Wu Meng-meng</i>	273
41. Analysis on the old gob water inrush accident of Kunlun mine in Zibo <i>Jiang Hua, Gai Wenren, Zhao Fu, Zhang Xin, Liu Hailin</i>	282
42. Risk assessment of floor water inrush in deep mine based on grey system theory <i>Liu Weitao, Pan Xiaofeng, Liu Huan, Shen Jianjun</i>	288
43. The water-disaster characteristic of coal mine in Shandong province and the research on prevention and control countermeasures <i>Zhang Wenquan, Ren Zhongping, Jiang Hua, Sun Gaoliang, Hang Qianqian, Dong Yi</i>	294
44. Determination of rational coal and rock pillars height of coal mining under the loose aquifer <i>Wang Jianhu, Shao Mingxi, Shang Yanfeng, Cao Siwen, Zhang Xin, Hu Chuanmeng</i>	306
45. Research on water resistance of the hanging wall of the fault tilting water-resisting key strata model <i>Wang Yuhe, Zhang Xinglei, Wang Houchen, Cheng Jiulong, Guo Wei</i>	312
